Kesimpulan

- Gangguan yang ada bisa terjadi pada gangguan pada uterus, gangguan pada ovarium, gangguan pada hipofisis anterior atau pada gangguan pada sistem syaraf pusat
- Amenore sekunder juga bisa disebabkan oleh penyakit- penyakit tertentu
- Penatalaksanaan amenore tergantung pada penyebab dan keinginan pasien. Tetapi terbaik diarahkan pada latar belakang penyebab

Non-menstruation, nor in a medical language known as amenide, is an independence of menstruation in a woman. This is normal in the past before puberty, pregnancy, breastfeeding and after menopause. The normal menstrual cycle of a woman involves the interaction between the hypothalamus-hypoti-axis, ovaries and healthy reproductive organs. Each woman has a different menstrual cycle. However, the average menstrual cycle is 28 days. He thus has been divided into two, namely: Primary threatens. This is a state of menstruation in a 16-year woman. Primary amenorrhea occurred at 0.1- 2.5% of the reproductive age. Secondary amenorrhea. In this type of amenorrhea, menstruation does not occur for 3 cycles. Even in the case of oligomenous (a type of secondary amenorrhea), only slightly menstrual blood. In some cases of amenorrhea / non-menstruation, there may be complications in the form of infertility. Especially in amenorrhea caused by hormonal disorders. Symptoms of amenorrhea sign amenorrhea / not menstruation is the occurrence of menstruation at the age of 16 years. These conditions can occur as much with or without secondary sexual development (breast development, pudding hair development). In addition, other conditions that can also be suspected are if you do not get menstruation, even if you have previously received menstruation. Other symptoms depend on what caused amenorrhea. Causes of amenorrhea Amenorrhea / not menstruation can be caused by many things. Some of them are: The late interference from puberta in the ovary (ovary), such as ovarian tumors, the failure of ovary functions of hormone production disorders, such as hypothyroidism, cushing syndrome of Serious diseases, such as the treatment of chronic kidney diseases of chronic diseases of the delegation of uterine anomalies of the uteror The pregnancy system, the excessive of the sports chromosome anomalies, not the growth of the organs and the uterine uterine vagina The disorders of theeo vaginal uterus) in the most common central nervous system of secondary amenorrea is pregnancy. If the possibility of pregnancy, breastfeeding and the use of contraceptive methods has been eliminated, then other causes that make it possible are: lack of stress and depression of nutrients, excessive weight loss, excessive sports obesity hypothalamic disorders and hypophysary ovaries disorders of eternal medicines Chronic disease and Asherman syndrome Diagnosis of amenorrea/non-menstruation amenorrhea is performed through the process of gathering information through a series of interviews. In addition, doctors will also perform physical examinations and support controls if necessary. In the physical examination in the amenorrea / you cannot find menstruation in the following conditions: you found the failure of growth of the secondary sexual organs, such as the growth of the chest and pubic hair. In other cases, body growth can also be found. Support checks: in primary amenorre. If there is secondary sexual development, organs are needed in reproduction, such as ovary, uterus, attachment in the uterus. The test can be performed with ultrasound procedures (USG), histeroscography, histeroscopy and magnetic resonance imaging (MRI). If there are no signs of the development of secondary sexuality, it is necessary to check the hormonal levels of FSH (folicle stimulant hormone) and LH (Linetic hormone). In the secondary amenorre. Of course, the first thing you should do is get rid of the possibility of pregnancy. After that, there may be a test of the thyroid-stimulating hormone (TSH). Because thyroid hormone levels can affect prolactin hormone levels in the body. In addition, prolactin hormone levels in the body should also be examined. If hormone levels and prolactin are normal, the strogen challenge / progestogen challenge test is an option that can be done to see the work of hormonal strogen in the layer layer In the uterus. You can then evaluate with MRI. The treatment of amenorrea performed will be adjusted to the cause of amenorrea / not menstruation. Jkakpenyebab is obese, then diet and exercise are the main key treatment. In addition, learning to deal with stress and reducing excessive physical activity can also help. Amenorrhea therapy is grouped according to the causes of higher and lower reproduction channels, the causes of ovaries and the causes of the central nervous system. Labia Aglutation Reproduction Channel (Lipia lip closure). Treatment can be done with estrogen cream therapy. Vaginal predetermined abnormalities, Hymen imperforata (Hymen does not have holes), and vaginal septate (the vagina has limitations between them). The therapy that can be done is with a small procedure of operation (incision or excision). Mayer-Rokitansky-Hauser syndrome. The treatment is performed with non-surgical actions in the form of dilation (ampliation) of the protuberance in the place of the vagina should be. Or you can also do surgical therapy by making a new vagina. Slice in the uterus. This can be treated with surgery to recover the ralled tissue. Sometimes, it is also given doses of estrogen after surgery to optimize the healing layers in the uterus. The gonadal interruption of the gonadal egg indung. This disorder can be treated with the replacement of growth hormone and sexual hormone. Ovarian tumor. To overcome this surgical procedure you can do to lift tumors. The interruption of the central nervous system of hypophysial disorders. This disorder can be treated with dopamine agonists can normalize prolactin levels in the body. Hypolamic disorder. To overcome this, therapy can be done according to the cause. Prevention of amenorrhea / not menstruation can be prevented by avoidingStudent, a great wife, the consumption of highly nutritious food, and consumes enough water. Also, also be sure to exercise that
